

EMR Quick Reference Guide

Administration – Refer to BOS as Source-of-Truth for Infants under 24hrs old

1. Issue

Infant age does not display correctly in EMR. The EMR will calculate from 00:01 on the day the infant was born. E.g. if the infant born at 15:00 at 16:00 the EMR will displays 14 hrs old, not 1 hr. iPM will record in days only. A change was requested to display DOB under 24hrs as 0 days. This change could only be configured in the Banner Bar:

DOB:18/06/2019 Age:0 Days

This has significant implications for safety and potential missed doses of important time critical meds such as Zuvidine for HIV prevention and Hep B Immunoglobulin for Hep B vertical transfer.

2. Workaround

- Refer to BOS as source-of-truth for baby age.

3. EMR Display

- Encounter Search Screen

* Encounter search window displays in hours
* Preview button, Person Tab displays in hours

- Powerchart

* Display in Patient information tab DOB displays in hours

- Display in Power Chart organiser

* Care Compass displays in hours
* Clinical Leader Organiser displays in hours
