

EMR Quick Reference Guide

Documentation – Allied Health- Diagnosis, Problems & Alerts

Allied Health Clinicians can add diagnoses within their scope of practice. Any diagnosis made by an Allied Health Clinician that is documented in clinical notes should also be added as a diagnosis in the patient record.

1. Navigate to **Dx Problems/Alert**.
The screen is split into “**Diagnosis**” and “**Problems**”.

In Cerner language – “**Diagnosis**” means the problem/s being addressed during the current admission, aka a list of current issues.

“**Problems**” include care alerts and past medical history, including conditions that are still active and those that have been resolved.

2. To add a diagnosis click “**+Add**”

3. Type the diagnosis into the yellow field and click the **binoculars** to see a list of options with SNOMED codes attached
4. Select the appropriate diagnosis and click “**OK**”

5. The “**Type**” “**Confirmation**” and “**Classification**” will default as shown here. Leave these as their default category.

6. Click “**Add Problem & Diagnosis**” if you want to add this issue to the patient’s chronic history as well.

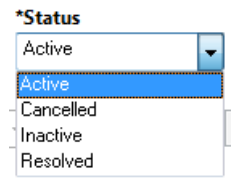

7. Common diagnoses can also be found in Folders.

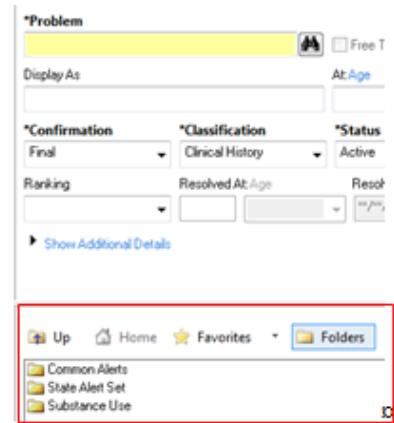

8. Problems and are added in a similar manner.

9. Select the appropriate status for each problem – **Active**, **Cancelled** (entered incorrectly), **Inactive** or **Resolved**.

A dropdown menu titled '*Status' with a list of options: Active, Cancelled, Inactive, and Resolved. The 'Active' option is highlighted in blue.

10. Care alerts **must** be added from the “**Common Alerts**” folder in order to display as “**Recorded**” in the banner bar.
