

## EMR Quick Reference Guide

### ED - Interim Admission Paediatric

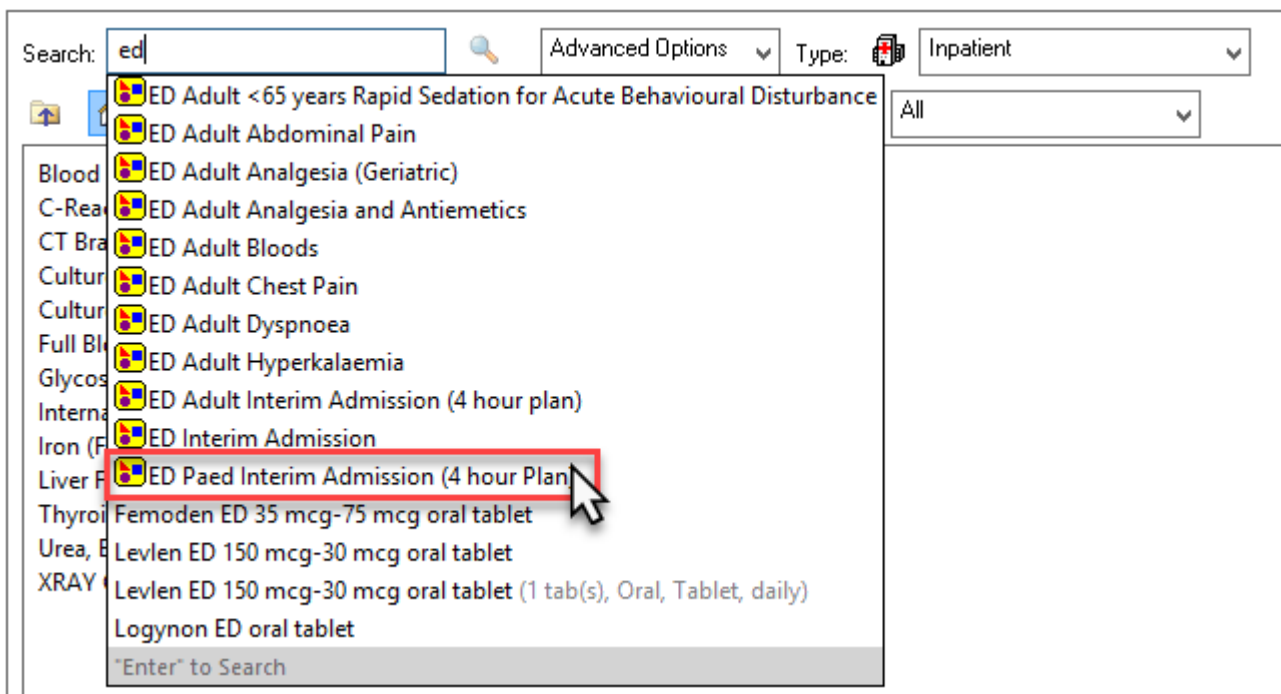

The ED Paediatric Interim Admission is the new replacement for previous paper based '4h plans'. This serves as a basic communication tool for staff as patients transition from ED to the ward whilst awaiting a formal admission by the receiving team. The relevant procedure guideline can be found from the Western Health intranet.

 This is performed by the ED medical officer & only after the referral to the admitting team

1. Select the patient on EMR and navigate to 'orders' from the table of contents

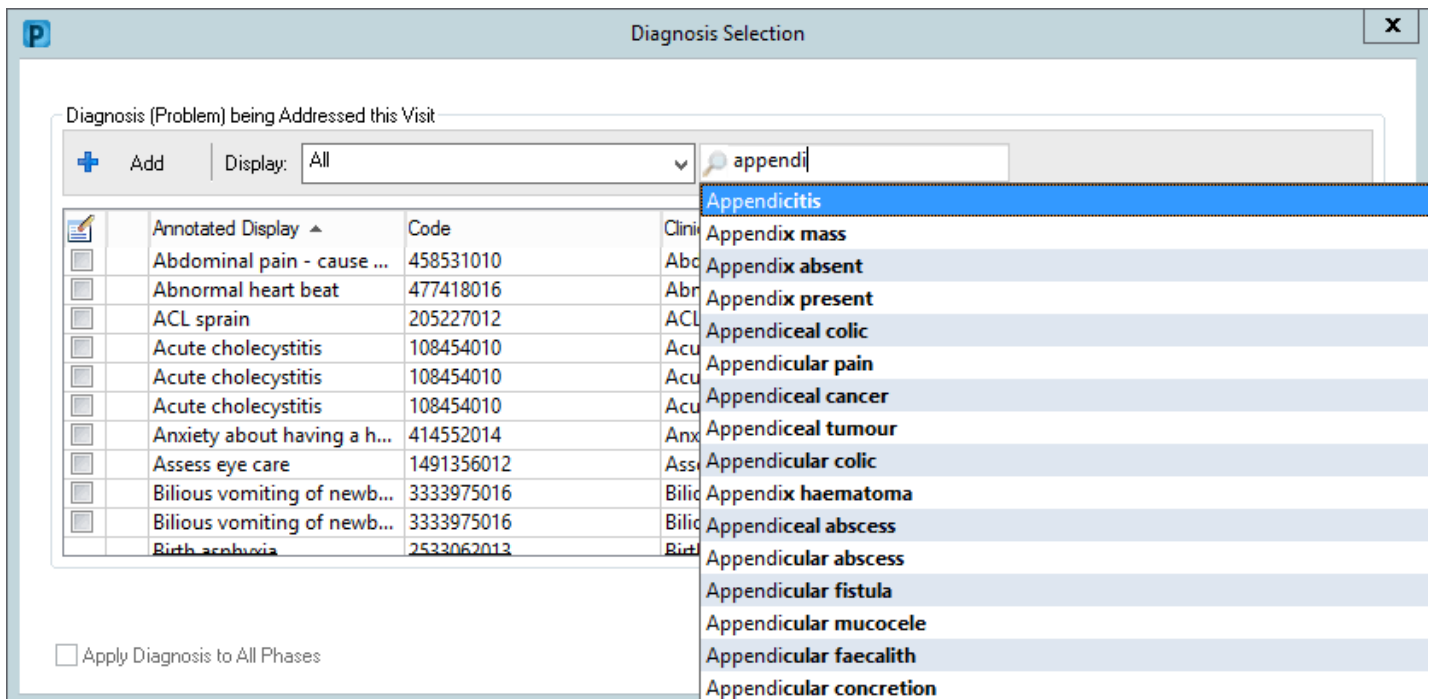

2. Search for the order set "ED Paed Interim Admission (4 hour Plan)" and select it

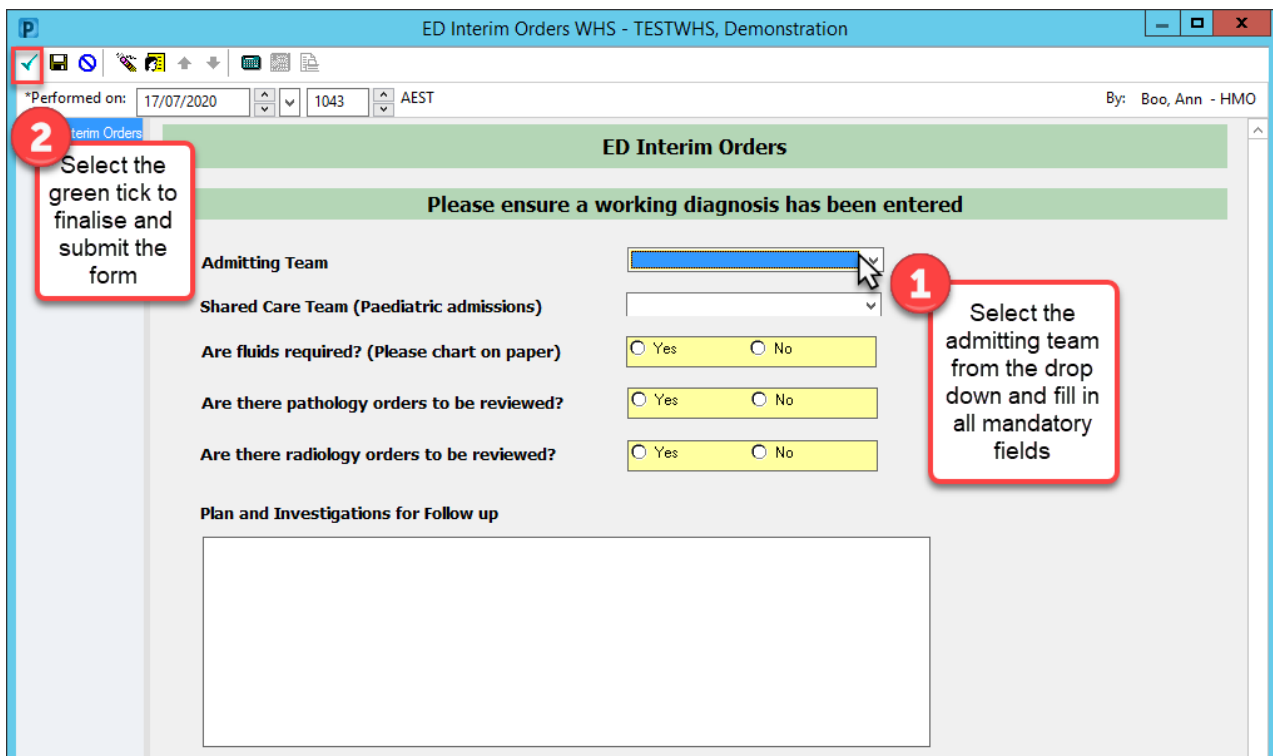

6. Type in and/or search for the current most appropriate diagnosis for the patient

7. Select Ok and then Select the Green tick to chart

To modify a diagnosis status later, return to the **Dx, Problems/Alerts** from the table of contents to modify

8. A new ED Interim Orders form will appear:

Once submitted, a document is generated and can be found within 'Documents' and in the 'Continuous notes'
