

EMR Quick Reference Guide

Medication Administration - Administration of Multiple Freetext Medications

- The EMR does not differentiate medications that are ordered as **freetext**.
- All medications prescribed using the orderable 'freetext medication', the EMR will treat as the same medication
- The last administered dose date/time for each freetext medication is displayed on the MAR in the row below the administration tile.
- It is best to refer to the **MAR summary** for last dose administered information.

Time View	12/01/2023 0000 - 2359	11/01/2023 0000 - 2359
Scheduled		
freetext medication (crea... cream, 1 application, Topical, daily, First dose 11/01/2023 14:57:00	@0800	NOW
freetext medication (Multivitamin) Multivitamin, 1 tablet, Oral, daily, First dose 11/...	@0800	1 tab(s) @1458

If more than ONE freetext medication is prescribed, please check the MAR Summary for the last administration dose date/time of EACH freetext medication.

Early Administration Warning

When a freetext medication is administered, that medication's **last given date/time** will reflect that of the most recent administered dose for **any other freetext medication administered** within the MAR.

- This can trigger a **false 'early administration'** warning as it could be referencing a different freetext medication.
- It is best practice to **always double check** that you are giving the right medication at the right time. If happy to proceed, select YES and an appropriate override reason e.g. As Instructed by doctor.

Medications	12/01/2023 08:00	11/01/2023 15:01	11/01/2023 14:58	11/01/2023 14:57
Scheduled				
freetext medication (cream) cream, 1 application, Topical, daily, First dose 11/01/2023 14:57:00				NOW Last given: 11/01/2023 14:58 AEDT
