

# Alerts - Add Interpreter Alert

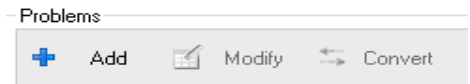

## This Quick Reference Guide will explain how to:

Add an Interpreter Alert in EMR

1. Click on **Dx, Problems/Alerts** from the Table of Contents (TOC) in the EMR.

Dx, Problems/Alerts

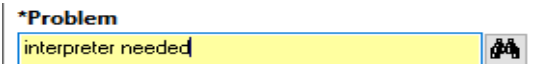

2. Click on **+ Add** under **Problems**.

### Important

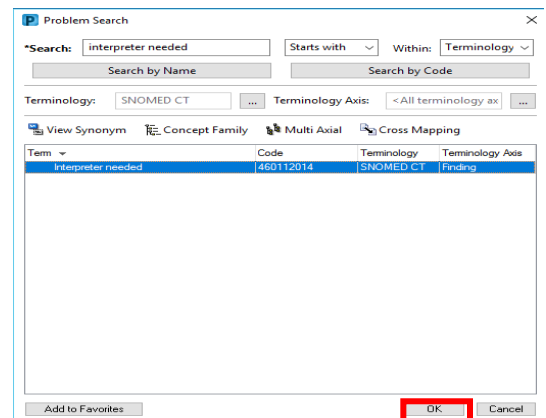

- Unlike the other alerts, **Interpreter needed** does not exist under the Folders

3. To add an Interpreter needed alert, type **interpreter needed** in the yellow field. Click on **Binoculars**.

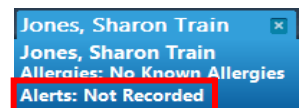

4. Problem Search window opens.

Select **Interpreter needed** and click **OK** to document.

5. This will populate in the Problem Window. Complete the information and select OK.

6. **Refresh** the screen. The alert does not update in the blue banner bar as it does with Alerts selected from the Folders.

It updates to Problems/Alerts section of the mPage (ISBAR Handover or Outpatients)
