to ketamine infusion 200 mg in Sodium Chloride 0.9% 100 mL CONTINUOUS

- 1. Navigate to Orders and click +Add
- Search for and select the "Intravenous Analgesia – PCA and Continuous ADULT" orderset.
- 3. Scroll down to the Ketamine section.
- 4. Select the Background (continuous) IV Infusion order, then right click and Modify
- The Continuous Details tab will display.
 Note: the Rate has been pre-defined as TITRATE to allow for nursing staff to titrate the infusion as per policy / as per order comments without the doctor having to modify the order each time.
