

Clinical Care - Patient has an Adrenaline Auto-injector In the Community (Medical)

1. If a **patient carries an Adrenaline Auto-injector in the community**, it must be documented on EMR (via Problems/Alerts). This triggers an alert to prompt clinicians during each admission to ask about the auto-injector and manage accordingly
2. If the patient has **brought their own Adrenaline Auto-injector from home into hospital** – clinicians must document that the ASCIA Action Plan has been sighted (or completed) and prescribe the patient's own auto-injector as a PRN order

Add a Problem/Alert:

1. Click on [Dx, Problems/Alert](#) from the Table of Contents (TOC)

2. Click **+Add** under 'Problems'

3. Click **Folders** icon. Navigate through **Common Alerts -> Medical -> Select "Meds - Patient has an adrenaline auto-injector in the community"**

4. Click **OK** to confirm and add

Sighting/Completing the ASCIA Anaphylaxis Action Plan and Prescribing Adrenaline Auto-injector:

1. Driven by the problem/alert above, an **alert** will display when any order is placed on the patient's chart

*Note: If no options are selected and **OK** is used to proceed, the alert will trigger again when placing an order at a later time*

Patient has an adrenaline auto-injector in the community

This patient has an **Adrenaline Autoinjector for Anaphylaxis** in the community.
