

# Orders - Flushes for Pigtails and Drain Tubes

## This Quick Reference Guide will explain how to:

- There is facility in the EMR record drain to tube flushes. However, there is no facility to specifically order Drain Tube Flushes. This is a known issue.
- The two best work around methods are either a **Communication Order**, or, a **Misc. Nursing Task Order**.
- Both, Doctors and Nurses can place these types of orders and a co-sign is not required.
- Both types of order will appear in **Care Compass, Orders, Activities and Interventions**.
- However, the Orders will appear differently in Care Compass. The **Misc. Nursing Task Order** will appear in the Task List, under the **Activities** Tab. Whilst the **Communication Order** will appear in the **PRN/Continuous** Tab.
- The **Misc. Nursing Task Order** will disappear when it is marked as **Done**. The **Communication Order** will not disappear when it is marked Done.
