

Perioperative Case Selection

This Quick Reference Guide will explain how to:

Use the Case Selection screen to retrieve details of scheduled perioperative cases by surgeon or for a set time period

Using Case Selection

1. Click the Case Selection button from the PowerChart toolbar.

2. First, set the Location to the area you want to retrieve cases for.

3. Choose the Select By criteria:

- Date
- Provider

4. To search by Date, adjust the From Date and To Date fields to include the desired date range, and click Retrieve.

5. To search by Provider, enter the Provider Name or search for them using the magnifying glass icon.

Search by name selecting the desired provider and clicking OK. Adjust the From Date and To Date fields to include the desired date range. Click Retrieve.

6. The scheduled procedures meeting the search requirements will display in the Case Selection list.
