# Perioperative Scheduling -Incorrect Encounter Association

Digital Health Quick Reference Guide

## This Quick Reference Guide will explain how to:

Cancel and re-book an Elective procedure where the case was associated with an incorrect encounter

#### **Definitions:**

Schapptbook – Scheduling Appointment Book, the application used for EMR scheduling Check-In – The action of linking a scheduled surgical case to a patient's inpatient encounter Encounter – Details of a patients visit under which all documentation for that visit is grouped

## **Surgical Cases and Encounter Association**

If a surgical case has been checked-in against an incorrect encounter, the only way to rectify the association is to completely cancel the case, and reschedule. For Emergency procedures, they can be cancelled and Direct-Scheduled. Elective cases however need to be re-scheduled from the iPM Waiting List.

When it is identified that a case was checked-in against the wrong encounter, the case must first be cancelled; this applies to both Elective and Emergency cases. See the Perioperative Scheduling - Perioperative Cancelations QRG

#### Important – Rescheduling different procedure types

- Elective Cases are to be rescheduled from the Surgical Elective Request List in Schapptbook
- Emergency Cases can be Direct Scheduled see the Perioperative Scheduling Direct Schedule Procedure QRG

## **Re-scheduling Elective Cases**

1. For the workflow to work, he EMR orders associated with the surgery must first be cancelled/deleted. Both the Procedure Order, and the Waiting List order from iPM must be closed.

Please see the <u>QRG: Orders - Cancel (Excluding Pathology,</u> <u>Medications and Radiology)</u>
